Romantic Genre MashupVon LauraI'm so excited to review my critique partner's novel! HEARTSICK is a unique mixture of romance, mystery, and medical science fiction. The prose is beautiful, and the fictional town is so well

described, that I could imagine myself walking through it. I especially loved the effects of an outbreak on a small town. I won't describe the plot or characters, but I will say that Luke, the main love interest described in the summary, is not the only guy to catch my attention (or the main character's either!). A great read!

Kurzbeschreibung
Quinn is looking forward to her senior year at Poe University. She has big plans to hang out with her best friend, flirt with a certain boy genius, party at her favorite dive bar and figure out what she's going to do after graduation with her not-so-useful art major. But that's before she meets Luke, a hot townie who's moved back home to help take care of his dying sister. And it's before a weird epidemic sweeps across campus, mysteriously turning people's eyes purple. Is it an odd side effect from a new party drug? Is it a rogue virus developed in a campus lab? Is it the mark of the devil? Soon the town starts blaming the university and the student religious group becomes frighteningly aggressive in their on-campus accusations. Quinn and Luke are caught in the middle until a tragic accident forces Luke to reveal the one part of himself he's kept carefully hidden. That he's so much more than the happy-go-lucky boy next door Quinn had believed him to be isn't a surprise but this truth might be too dangerous for her to handle. 81,000 words
